Caring for bariatric patients has never been easier with the introduction of the Bariatric Shower Commode Tilt. Bariatric patients can be transferred into the Shower Commode Tilt and then transported into a private or central showering area. Once the showering process has started, the patient can be tilted comfortably to an optimal position for shampoo and rinsing. Once completed, the patient can be transported back to their room or desired area. For the caregiver, the Bariatric Shower Commode Tilt provides the ability to shower and transport all within a single unit, thus reducing the amount of transfers needed for bariatric hygiene care and the risks associated with bariatric care.
Bariatric Shower Commode Tilt
Model SCT715

Benefits:
The Bariatric Shower Commode Tilt is an electrically powered shower chair with a 32 degree tilting function. The Shower Commode tilt is designed to provide a comfortable showering alternative in instances where prone position might cause discomfort or distress to the user. By tilting-in-space, the Bariatric Shower Commode Tilt accommodates spaces with limited room for operation.

- Electric tilt as far as 32 degrees
- Calf supports reduce stress on upper leg and thigh
- Extra wide seating area for additional comfort
- Open lower back provides additional room to accommodate girth
- Heavy duty locking casters
